

## People involved in the Project

### When was the project set up?

The latest version is Milestone 6, released April 25, 2010. This release contains 26 playable levels. This release is still a source-only release. Currently Mileston 7 is planned to recieve an installer and binary packages. For now, the game is developed for Linux only. However, nothing precludes knowledgeable programmers to build a Windows or MacOSX version.

Unfortunately the project doesnt currently get any funding, however they do have numerous volunteers. The main person associater with the project is Peter van Ginneken who is from Germany and is one of those very useful volunteers. Peter Van Ginneken is a supply chain and a cash manangement director. He lives in the netherlands and is widely famous there. *"Litres of bile entered the bloodstream of many Dutch sport fans on Tuesday night and there really is a down sentiment throughout the country", Dr Van Ginneken adds. "Such minor incidents can cause mass sentiments. It's like the 'butterfly effect', where the wing flap of a small butterfly can trigger a tornado thousands of miles away".*
