Viruses

computer viruses are small software programs, that are designed to spread from one computer to another. they could interfere with your Childs computer operation. a virus could delete any data on the computer, or even erase everything off the hard disk.

viruses can be a nuisance sometimes, and they could also be very annoying for both you and your child. if you do not want your child to be accidently downloading any viruses on their computers, then it would be very useful to block any unknown, or unwanted websites on your computer.
