[Back ups](#) [5]

Back ups are systems of which one can store important information to be retrieved when needed. There are many different ways of storing information e.g. CD ROMs and External harddrives.

Why do we need it?

We need back ups so that we don't lose valuable information. In case of fire a computer would not be accessible anymore. But if you had a copy of all your needed information on a CD stored in your friend's house. You would be able to retrieve information.

Where to keep Back up.

Back ups have to be kept in a reliable source.

- External harddrive to save vast amounts of work
- Online storage. (Social networking sites e.g. Facebook)
- USB stick (least reliable source)
- Other computers.
- CD ROMS (Purchased cheaply at Shops)
- DVD R
