computer saftey 2

viruses

These are not the things that make you get ill but when they are on your computer they make you feel annoyed and sad. there are many ways of you getting a computer virus but not many people know about them all. I am going to tell you what they are so you can do the best you can to stop yourself getting a virus.

way number 1,

When you are on the internet and down the side is a banner that is advertising something that catches your eye you decide to click on it and find the page not loading. A few days later your computer ends up having a virus and you don't know how. This is a simple but effective way as most people will see the offer as being harmless and click on it to see more and end up getting a virus.

way number 2,

When you find something that you want to download and go ahead and download it without anybody saying yes you can sometimes automatically be downloading a virus. I'm not saying that all downloading you will ever do will give your computer a virus but ask permission before you download it.

please take all of these points into action by following the ways you can stop them happening.
