	<h2>Viruses</h2>	
 <p>Home [1]</p> <p>Viruses [2]</p> <p>Hackers [3]</p> <p>Backups [4]</p> <p>Safety - rules [5]</p> 	<h2>Viruses</h2> <p><u>What are viruses???</u></p> <p>Viruses multiple themselves by programs from your computer sending it to more people's computer so it can operate incorrectly or corrupting a computer's memory.</p> <p><u>Different viruses and what they can do?</u></p> <p>. Trojans or Trojan Horses unsavory breed of malicious code. Worms uses computer networks to replicate itself it scans your security to get itself to others computer. E-mail viruses replicates and put themselves in the email message automatically sending themselves to other people.</p> <p><u>How viruses can trick you and what can they do to you or your computer?</u></p> <p>They can trick you by sending you a false emails, look through your computer for your information. Sending your information everywhere. And they could also be fake adverts for good price or good something then you open it. It spings on you and you then now a virus is upon you and it could send infirmation around about you or damaging your computer sending your work away from you and losing all you need away from you.</p>
