Importance of saving work

Computer Viruses

Backups have two distinct purposes. The primary purpose is to recover data as a

reaction to data loss, be it by data deletion or corrupted data. Data loss is a very

common experience of computer users. 67% of internet users have suffered serious

data loss. The secondary purpose of backups is to recover data from a historical period

of time within the constraints of a user-defined data retention policy, typically

configured within a backup application for how long copies of data are required. Though

Computer Hacking

Computer Backups

backups popularly represent a simple form of disaster recovery, and should be part of a disaster recovery plan, by themselves, backups should not alone be considered disaster recovery. Not all backup systems and/or backup applications are able to reconstitute a computer system, or in turn other complex configurations such as a computer cluster, active directory servers, or a database server, by restoring only data from a backup.
