

VIRUSES	
Home [1]	<i>Viruses are programs that invade your computer and can access personal information on your computer.</i>
viruses	
Hacking [2]	<i>Here are some types of viruses...</i>
Backups_ [3]	<i>Trojans or Trojan Horses Another unsavory breed of malicious code are Trojans or Trojan horses, which unlike viruses do not reproduce by infecting other files, nor do they self-replicate like worms.</i>
	<i>Worms A worm is a program very similar to a virus; it has the ability to self-replicate, and can lead to negative effects on your system and most importantly they are detected and eliminated by antiviruses.</i>
	<i>Overwrite Viruses Virus of this kind is characterized by the fact that it deletes the information contained in the files that it infects, rendering them partially or totally useless once they have been infected.</i>
