Safety - Rules

Ways to stay away from viruses?

Install anti virus software. Update all software. Install only trusted software. Avoid P2P soft wares. Delete unknown email. Do not touch ad. Run virus scan normally. Be careful what you attach to your computer. Avoid shabby websites. Turn on or install firewall. Secure your wireless network. Use a complex password for login.

Ways to stay away from hackers?

Never post information about you unto a public place in the computer, no any where. Always run your anti-virus scan and your firewall. Disconnect your internet when you are not using it.

Main things that are important

Main things to acknowledge is that you should understand everything we have informed you of so when you have internet problems you always know what to do. You should always have at least two backups e. g one on your computer and one on a memory stick. Hope you have learnt a lot so you can inform your children to stay away from the dangers of a computer and they will be awe of all the bad and good things. Thank you.
