Report on INGOT [Comenius](#) [2] Project - Ingot - Open Standards in ICT for Europe

Objectives

- To promote open attitudes to, and a shared understanding of, new assessment methods for ICT supported by Web 2.0 technologies
- To contribute to the development of a new 21st Century paradigm for learning through participation
- To provide a focus for sharing open learning resources produced by students across the EU.
- To develop an understanding of European Citizenship through open resource development.
- To develop the language competence of students and teachers in the context of ICT assessment
- To develop inter-cultural empathy between the partners
- To work in groups to enable peer review of the assessment process
- To provide a flexible assessment regime that enables participation through extra-curricular activities.
- To contribute to the European Qualifications Framework (EQF)

Progress report

The first meeting took place in Mealhada Portugal at the Escola Profissional da Mealhada. The partners participating were Germany, Manfred Ratten, Gerhard Fass, Gunter Stoffels, Ralph Schuetz; UK, Karen Lee, Jo Page, Ian Lynch, Rosemary Lynch; Turkey, Ahmet Firat, Fatih Barbarosluoglu, Ato Yaman, Ahmet Hacıoglu; Portugal, João Paço, Joaquim Lopes, Eduardo Martins, Luis Breda, Paulo Rafael, Diogo Lourenco, José Oliveira, Filipe Pinto.

The outcomes of the meeting were:

Testing of all delegates in the use of the [INGOT](#) [1] assessment methods. This included setting up accounts and the use of a specialist website with an on-line electronic mark book and on-line certification designed to fit the European Qualifications Framework and meeting the requirements of the UK examinations regulator. [INGOT](#) [1]. The assessment pedagogy is based on an assessment for learning model using criteria matching verified by set tests and tasks supported by the [INGOT](#) [1] Virtual Learning Environment.

The partners discussed the application of assessment for learning in the context of learning through participation. They looked at work submitted through on-line [INGOT](#) [1] by students in the UK. This raised questions and answers about the need for change in the 21st Century learning especially related to involvement of learners in their own assessment process. The feedback confirmed a raised understanding of how the assessment methods developed would improve learner motivation.

One of the key issues in using criteria matching in discussion generated around the assessment process. This has strong potential to contribute to language development as well as technical capabilities.

First Year Report

-->

The second meeting took place in Istanbul Turkey at the Galatasaray Cumhuriyet Lisesi School. The partners participating were Germany: Manfred Reher, Gerhard Fess, Dirk Schulze, Ralph Schatz; UK: Charlie Hare, Sanna Ashby, Ian Lynch; Portugal: Manuela Abov, Joaquim Lopes, Eduardo Martins, Luis Dreda, Paulo Rufus, Antonio Capela, Hugo Botelho; Turkey: Ahmet Fırat, Fatih, Barbarosoglu, Aziz Yehem.

The outcomes of the meeting were:

Further training of all delegates in the use of the INGO assessment methods building progressively on the work in Portugal. This included extending the use of the specialist certification website to use of the Web 2.0 Drupal environment for creating student portfolios and presenting information and the Moodle VLE supporting on-line courses. Each partner now has an account on all three web sites. They are now capable of producing their own language translation of the Comenius project web site within the Drupal management environment and of devising courses in Moodle. This is also relevant to teaching students how to achieve the Silver INGO certification which requires the creation of an e-portfolio.

The partners from Portugal provided an example of how to share translation work with students using [Quercus](#) [1] on-line applications which can then be easily transferred into [Quercus](#) [5] and Moodle. This generated greater understanding of how the applications platform is shifting from the desktop to the internet reducing operating costs and adding greater scope for participative learning and sharing resources. The flexibility this provides, eg for extracurricular participation, demonstrates the educational potential with all partners now in a strong position to spread their learning to other teachers in their own establishments and their wider communities.

A great spirit and cultural empathy is being developed within the group. The professional education perspective has provided a firm platform for developing shared values. There is openness to peer review and cooperative support with a wide range of experience represented in the delegates.

The next stage in the project will be to use the learning in the first year to enable the production of learning resources supporting INGO certification in each partner language. The INGO Comenius website will be developed further providing information about the project in each of the partner languages and partners will provide exemplar courses in Moodle in their own languages. Finally an evaluation will take place to inform others and to explore ways of extending valuable developments for the benefit of all.
